

Engineering Data Manual

# Aqu@Fan II

Fan Coil Units

New : Available with EC motor

**AWC, AWN, AHC, AHN Models**

## Quality, efficiency and reliability, built into every unit...

### ■ Vertical console units with cabinet, AWC type

**AWC** vertical console units are designed for use in three different types of installation :

- as a wall hung console in areas where a skirting board prevents the use of a floor mounted console ;
- as a floor console with optional front air intake RF (most frequently located below a large window) ;
- as a floor console with support feet and bottom air intake.

They feature a modern decorative style cabinet with matching plastic discharge grille, providing a high performance unit that is attractive and durable which will complement any room decor.

The AWC models can be fitted, as optional, with electromechanical or electronic Aqu@Net control, with valve kits, etc.

### ■ Vertical concealed units without cabinet, AWN type

**AWN** vertical chassis only units are designed for applications that require a fully concealed or a fully recessed installation.

These units include all the features of the AWC vertical console unit type except that only the chassis is supplied instead of decorative style cabinet.

Like the AWC units, Aqu@Net control (except the remote control) as well as other electromechanical controls and valve kits can be fitted, as optional, on unit.

Units can be fitted with optional feet (supplied loose), if floor mounting is required.

### ■ Ceiling exposed units with cabinet, AHC type

**AHC** ceiling exposed units are designed for ceiling mounting in areas where it is necessary to conserve floor space.

They contain all the features of the AWC unit within the decorative style cabinet with matching plastic discharge grille.

Standard version is designed for rear horizontal air intake without inlet grille.

Similar to the previous models, the Aqu@Net control can be supplied, as optional, on AHC units with remote control. Other optional controls and valve kits are also available.

### ■ Ceiling concealed units without cabinet, AHN type

**AHN** ceiling chassis units are designed for concealed or recessed ceiling installations. This unit consists of the AHC basic unit horizontally installed.

AHN units contain all the features of the AHC ceiling exposed units except that only the chassis casing is supplied instead of the decorative style cabinet.

Possibility of supplying separately an optional Aqu@Net type remote control for wall mounting. Other optional controls and valve kits are also available.

## New range of fan coil units Aqu@Fan II : "Innovation for an optimum comfort"

Easy to install, improvement in sound levels and performances, Aqu@Net electronic control...

The range of **Aqu@Fan II** fan coil units is issued from a development striving to meet customers' wishes and advices.

Aesthetic of the grille, associated with the casing refined finish allows a harmonious and smart integration of the fan coil units **Aqu@Fan II** in all types of interiors.

They are the ideal solution to air condition agreeably and efficiently, flats, hotels, hospitals, offices and other premises, all year long.

The Aqu@Fan II fan coil units range includes **9 sizes** with air flows ranging from **100 thru 1600 m³/h**, for cooling capacities of **1 thru 10 kW**.

The Aqu@Fan II fan coil units are equipped with optimized coils to bring the best possible performances in **2-pipe, 4-pipe, or 2-pipe/2-wire versions**.

Moreover, the new technology of the fan motor assembly, through the use of optimized centrifugal impellers, associated with a **5-speed motor enables all Aqu@Fan II models to reach an average decrease in sound levels of - 4dBA**, compared with the previous range, offering therefore a maximum acoustical comfort.

Aqu@Fan II range is provided with an **electronic control : Aqu@Net**, whose ergonomic and discrete remote command can be loose or fitted on the fan coil unit.

All settings being made at factory, no needs to be done by installer.

This control, especially innovating, **offers as standard a master/slave function up to 15 units** from one single remote control.

Other features like window contact, occupied/unoccupied, antifreeze modes are integrated without involving any price add.

### Design features

#### Cabinet

All units are manufactured from heavy-gauge zinc coated sheet steel for long life and durability. Oven baked powder epoxy paint insures a good protection and an attractive finish for all outside panels (Standard colour : **RAL 9003**).

The standard discharge grille is made of "ABS" plastic and has a different colour from the cabinet (standard colour : **Pantone 427C**).

On the versions with optional front intake, monobloc grille, painted in RAL 9003, is mounted flush to the cabinet. Grille can be removed by releasing the two quarter turn fixing screws to get access to the filter.

#### Casing

Made of galvanized steel insulated with closed cell polyethylene foam. Casing has 4 slotted lugs on its rear side which allow the unit to be easily and quickly installed at site, in wall or ceiling mounting.

Access to all internal components of the unit is facilitated by an easy dismounting of the casing.

Condensate drain pan is fabricated from galvanized sheet steel coated with closed cell polyethylene foam on external face. **The drain pan is painted** to insure the anticorrosion protection.

All models are equipped with an inclined condensate drain pan to ensure optimal condensate draining and to minimize water retention.

Moreover, models 20 to 70 are also equipped with a **V-shape pan in order to allow either vertical or horizontal installation**.

#### Coils

Made of staggered copper tubes, mechanically expanded into high efficiency hydrophilic aluminium fins, assuring maximum heat transfer efficiency.

Each fan coil unit is equipped with a 2 or 3-row cooling coil plus 1 row optional heating coil.

On models 10, 80 and 90, the 4-pipe and 2-pipe/2-wire coils are supplied in one finned block. On models 20 to 70, the 4-pipe and 2-pipe/2-wire coils are additionnal to the 2-pipe coil.

Each coil is supplied with headers having air vent at the highest point and drain plug at the lowest point. The water connection of each header is 1/2" gas female threaded type.

For the 2-pipe/2-wire systems, the electric heating coil is composed of heating **rod type resistances** mounted inside the coil (at the place of hot water tubes).

**Note :** The water connection side is defined left-hand or right-hand when observer is looking at the unit from the discharge side.

#### Fan and motor assembly

The units are fitted with a fan-motor assembly of which the fan is composed of double inlet forward curved centrifugal wheel(s) dynamically balanced and specially designed for an optimal air flow and a low noise level.

The Aqu@Fan II range can be supplied with 2 types of motor :

- The **standard AC motor of asynchrone direct drive type** having 5 speeds, 3 of them are factory pre-wired, equipped with a built-in normally closed thermal protection of automatic reset type.
- The **EC motor** of high efficiency and low electrical consumption type for a significant energy saving. The motor is suitable for 0-10 V input, ensuring variable speed capability. It is fitted with ECospeed3 interface card (supplied as standard) for a 3-speed optimized running. Available on sizes 20-30-40-50-60.

Power supply : 230 V±10%/1 Ph/50 Hz - 60 Hz (50 Hz on size 70).

#### Electrical connections

Units are supplied complete with internal electrical wiring terminating in a junction block protected by a cap or the cabinet.

Cabinet internal space allows installation of optional control systems supplied by manufacturer or others.

When the optional Aqu@Net control is fitted on the unit, the controller includes a junction block for power supply connection and incorporates, as standard, a cable clamp.

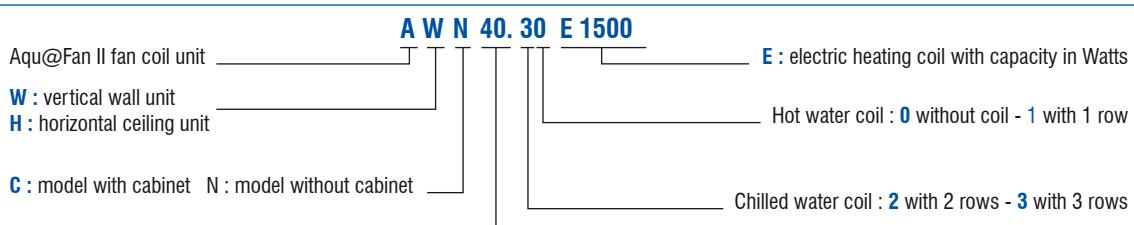

#### Filter

Easily removable cleanable filter having fire class M1 and G2 efficiency. Filter media is mounted on a metallic frame.

#### Options

Many different options and accessories are available for all units : see chapter "Mounting accessories". Controls are shown in the corresponding chapter.

## Aqu@Fan II AWC Models - Mounting Accessories

### Options and accessories

<b>STD</b>	standard version for wall mounting (no support feet supplied).
<b>MP</b>	support feet for floor mounting.
<b>MPG</b>	air intake grille between feet.
<b>RF</b>	front air intake grille (no support feet supplied).
<b>RP</b>	back partial air intake with support feet.
<b>RT</b>	back full air intake with support feet.
<b>RC</b>	floor air intake with support feet.
<b>RVCA-RT</b>	air intake arrangement with motorized (non controlled) on/off damper (back or front intake).
<b>RVCA-RC</b>	air intake arrangement with motorized (non controlled) on/off damper (floor or front intake).
<b>RVCM-RT</b>	air intake arrangement with manual damper (back or/and front intake).
<b>RVCM-RC</b>	air intake arrangement with manual damper (floor or/and front intake).
<b>TMT</b>	telescopic wall sleeve.
<b>TMTG</b>	telescopic wall sleeve with external grille (filter not supplied).
<b>RH</b>	cabinet backwrap for plinth.
<b>ALV</b>	finished back panel (for unit mounted in front of glass wall).
<b>BAC</b>	auxiliary drain pan (for units without motorized valves).
<b>FLOOR FIX</b>	floor fixing brackets (for MP and ALV).

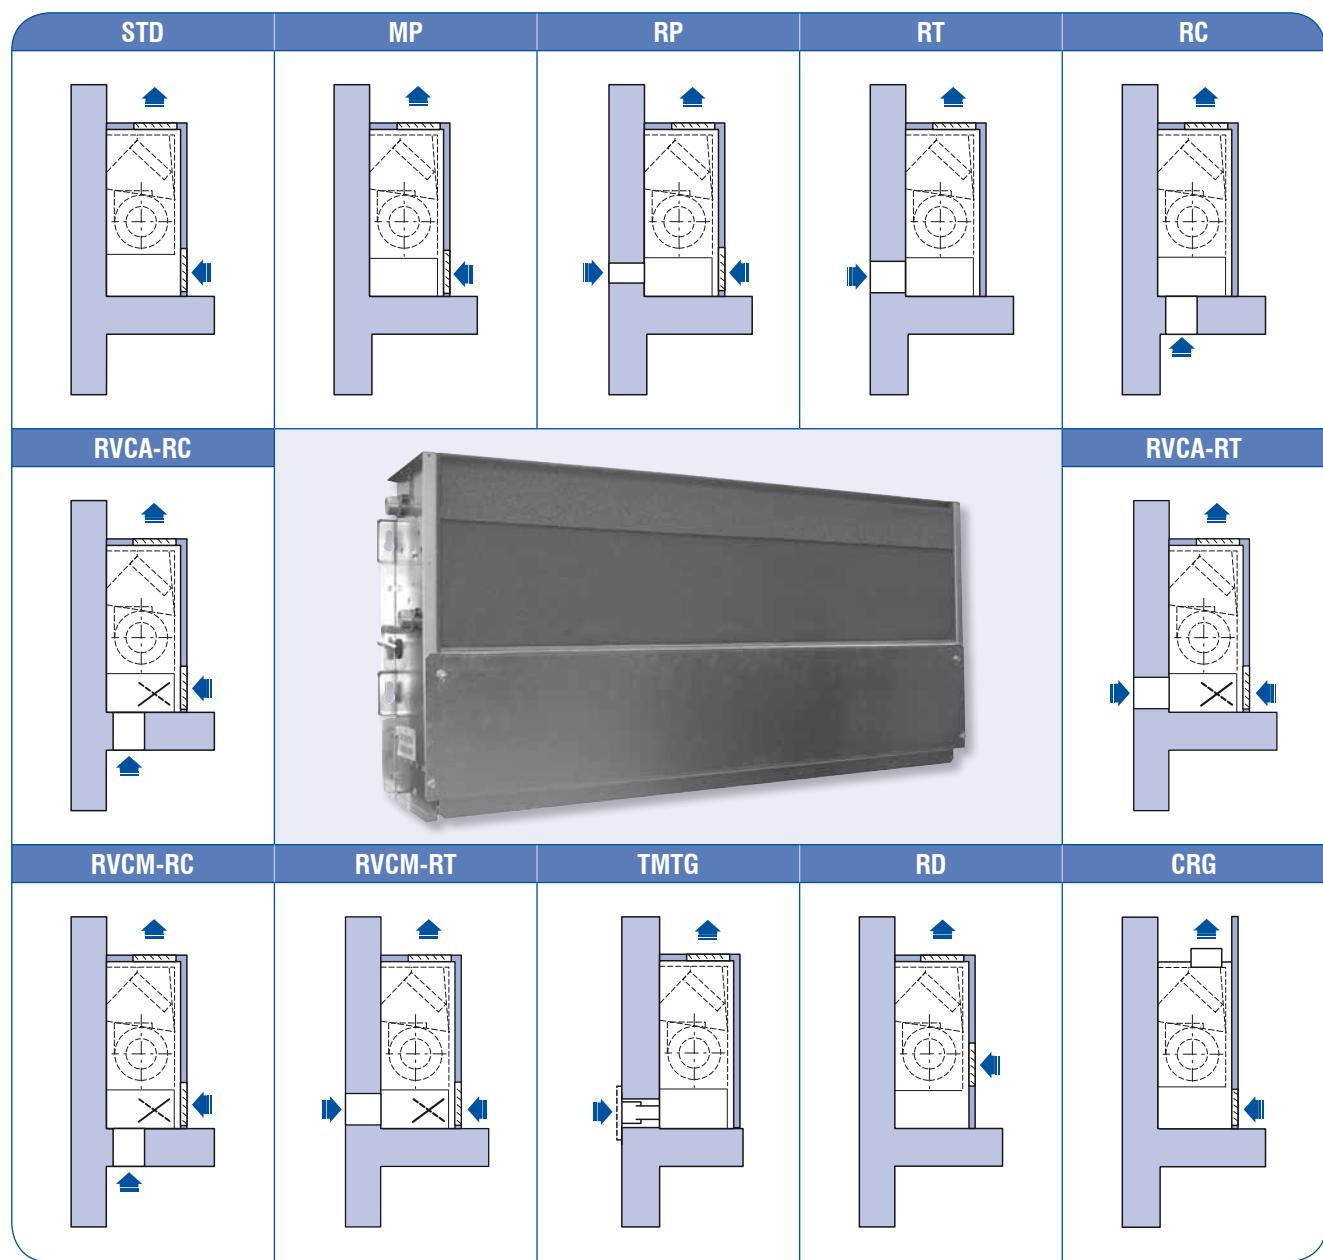

\* Can be fitted with optional intake grille between feet.

## Aqu@Fan II AWN Models - Mounting Accessories

### Options and accessories

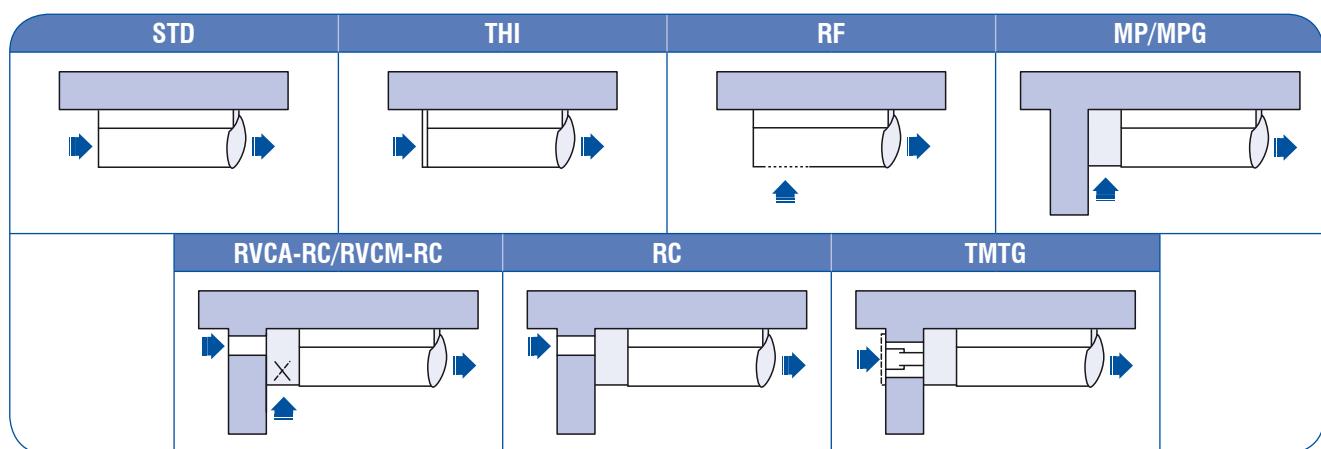

<b>STD</b>	standard version for wall mounting (no support feet supplied).
<b>MP</b>	support feet for floor mounting.
<b>RD</b>	front air intake.
<b>RP</b>	back partial air intake with support feet.
<b>RT</b>	back full air intake with support feet.
<b>RC</b>	floor air intake with support feet.
<b>RVCA-RT</b>	air intake arrangement with motorized (non controlled) on/off damper (back or front intake).
<b>RVCA-RC</b>	air intake arrangement with motorized (non controlled) on/off damper (floor or front intake).
<b>RVCM-RT</b>	air intake arrangement with manual damper (back or/and front intake).
<b>RVCM-RC</b>	air intake arrangement with manual damper (floor or/and front intake).
<b>TMT</b>	telescopic wall sleeve.
<b>TMTG</b>	telescopic wall sleeve with external grille (filter not supplied).
<b>BAC</b>	auxiliary drain pan (for units without motorized valves).
<b>CRG</b>	discharge duct collar.

## Aqu@Fan II AHC Models - Mounting Accessories

### Options and accessories

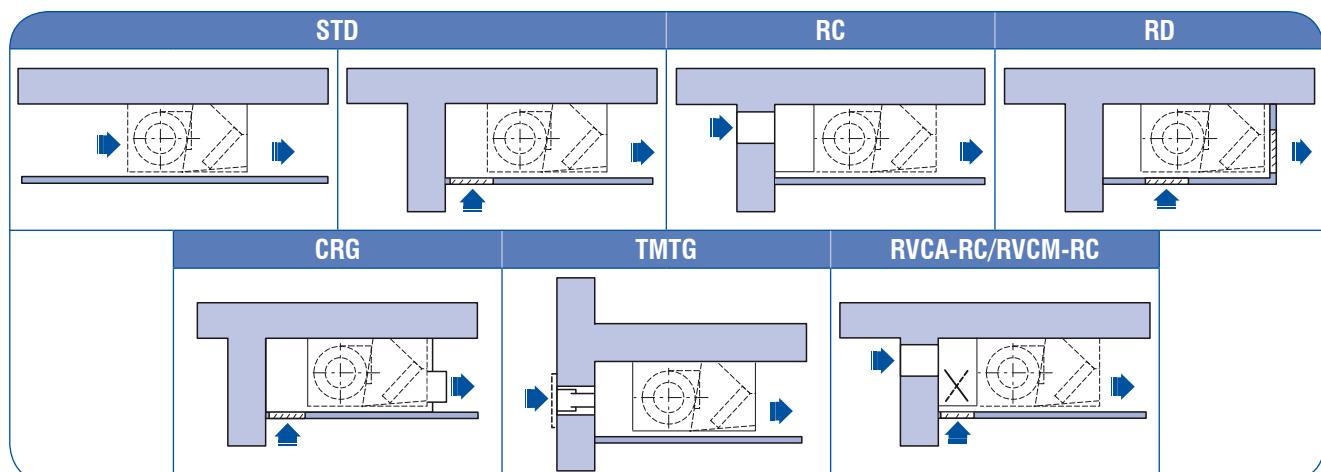

<b>STD</b>	standard ceiling mounted version with rear air intake (no inlet grille).
<b>RF</b>	bottom air intake grille.
<b>RVCA-RC</b>	air intake arrangement with motorized (non controlled) on/off damper.
<b>RVCM-RC</b>	air intake arrangement with manual damper.
<b>RC</b>	rear air intake with support feet.
<b>MP</b>	support feet.
<b>MPG</b>	air intake grille between feet.
<b>THI</b>	return air perforated panel with filter media.
<b>TMT</b>	telescopic wall sleeve.
<b>TMTG</b>	telescopic wall sleeve with external grille (filter not supplied).
<b>BAC</b>	auxiliary painted drain pan (for units without motorized valves).

## Aqu@Fan II AHN Models - Mounting Accessories

### Options and accessories

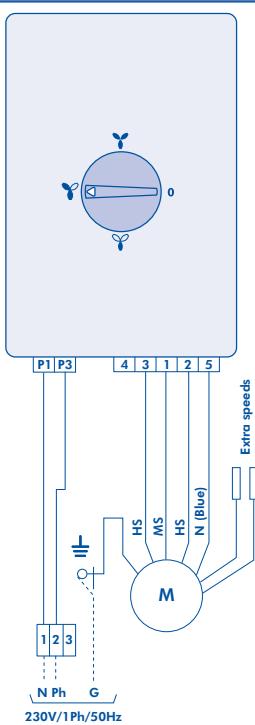

<b>STD</b>	standard ceiling mounted version with rear air intake (no inlet grille).
<b>RVCA-RC</b>	air intake arrangement with motorized (non controlled) on/off damper.
<b>RVCM-RC</b>	air intake arrangement with manual damper.
<b>RD</b>	bottom air intake.
<b>RC</b>	rear air intake with support feet.
<b>CRG</b>	discharge duct collar.
<b>TMT</b>	telescopic wall sleeve.
<b>TMTG</b>	telescopic wall sleeve with external grille (filter not supplied).
<b>BAC</b>	auxiliary painted drain pan (for units without motorized valves).

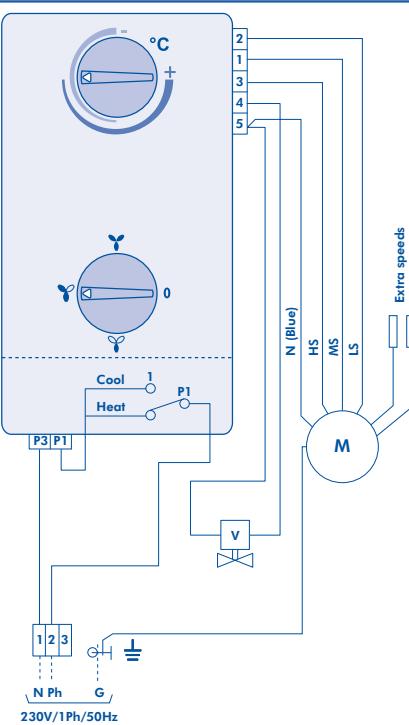

## Aqu@Fan II - Main Controls (Optional)

**CMV (supplied fitted)  
Manual fan speed selector**

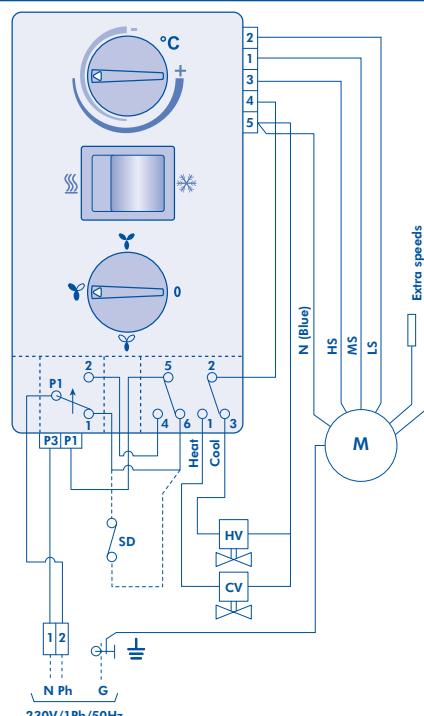

**TBV (supplied fitted)  
Electromechanical control with valve**

- 4 position manual fan speed selector : OFF/LS/MS/HS.

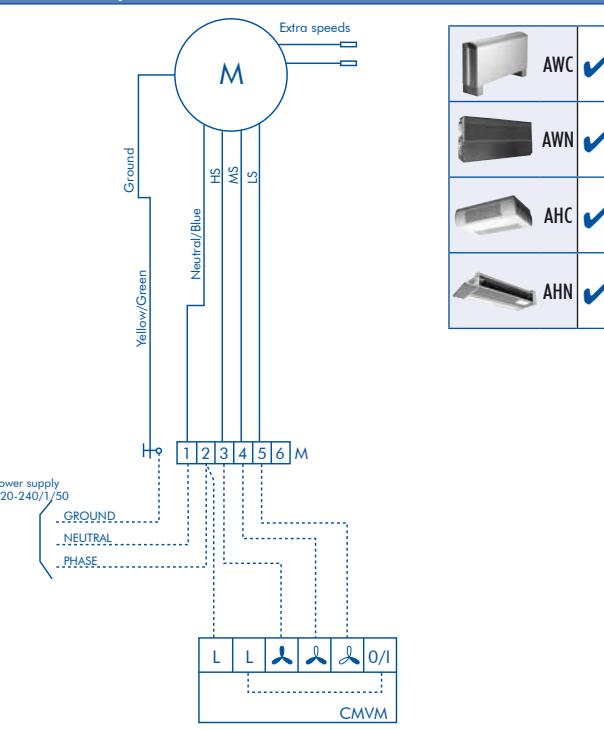

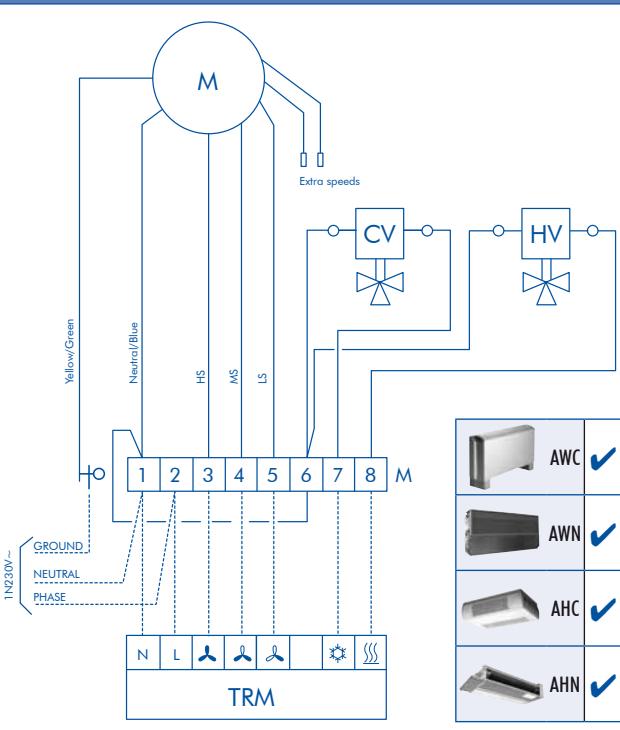

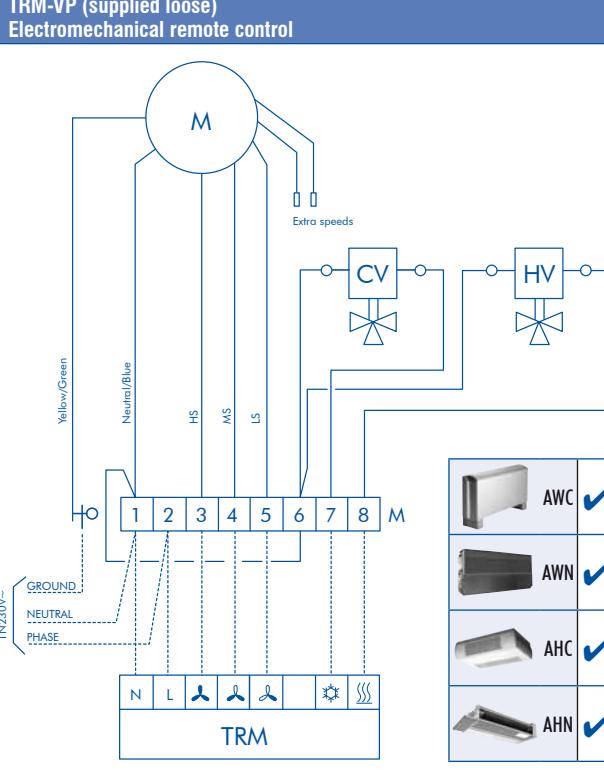

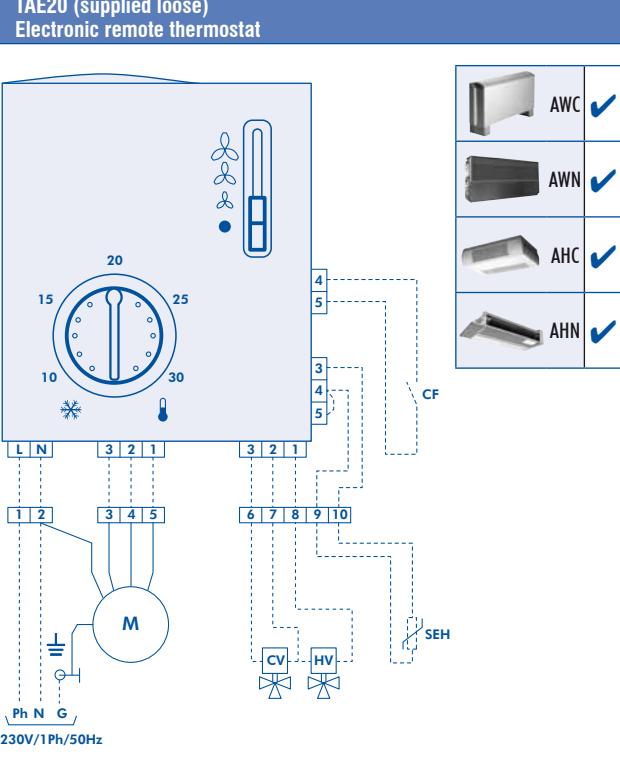

- Action on valve and fan, 2-pipe system in heating or cooling mode.
- Set of thermostat + 4-position manual speed selector : OFF/LS/MS/HS.
- Option TBV1 for action on valve only with constant fan operation.
- For reversible 2-pipe system with summer/winter automatic changeover, possibility of mounting with a water changeover sensor PCO, use of 4-way valve is mandatory.

**TBMV (supplied fitted)  
Electromechanical control with valve(s)**

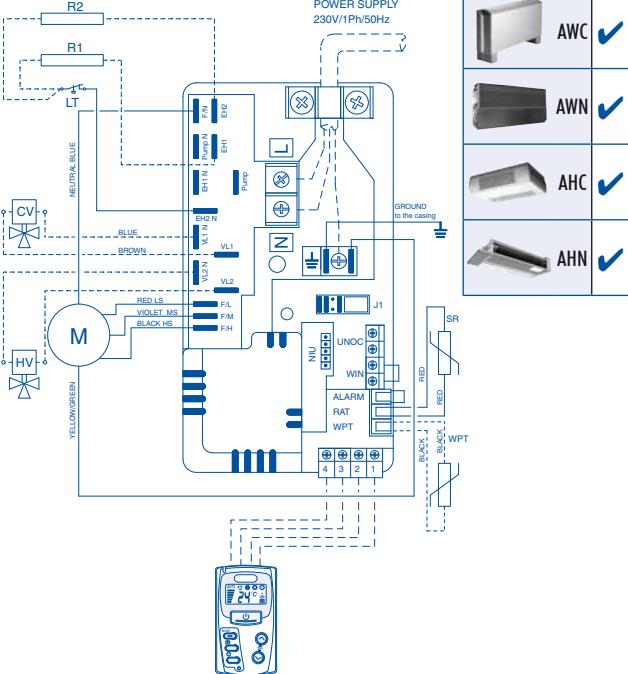

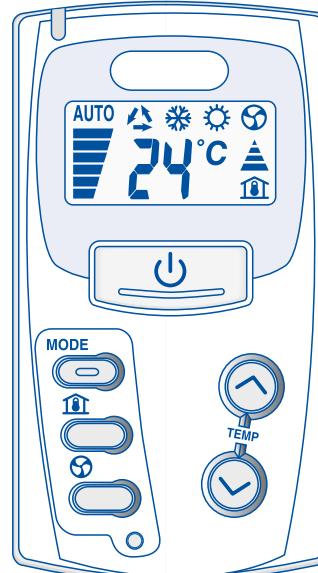

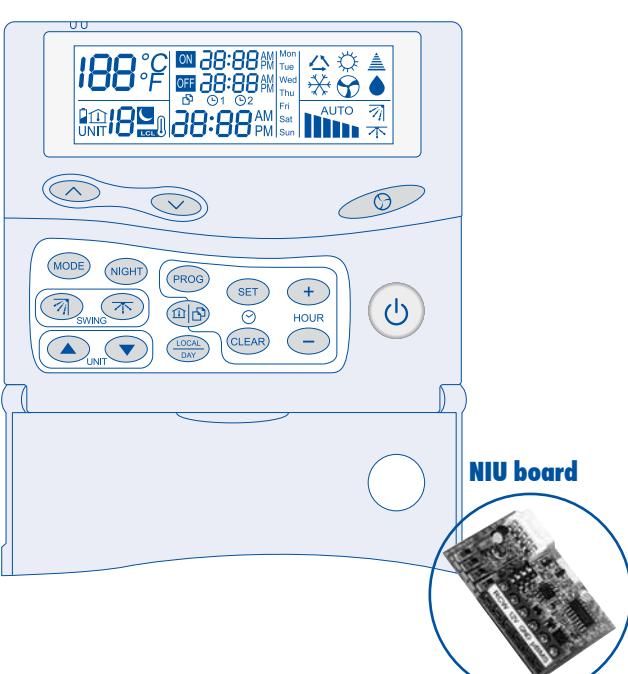

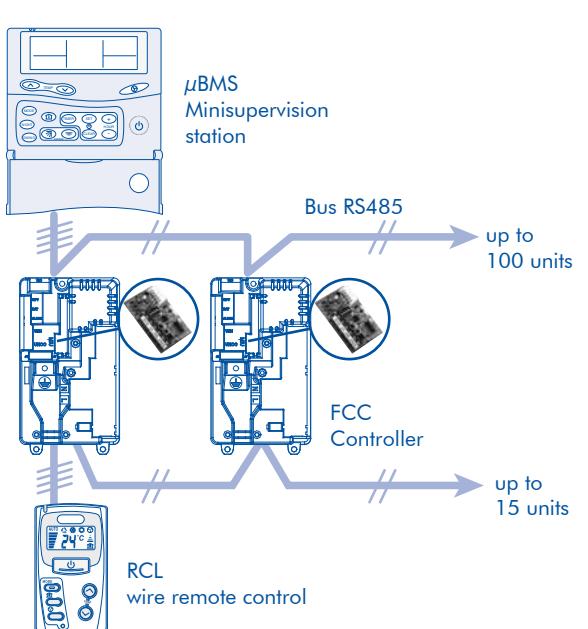

- Action on valves and fan, 4-pipe, 2-pipe/2-wire or manual changeover 2-pipe system.
- Set of thermostat + summer/winter switch + 4-position manual speed selector: OFF/LS/MS/HS.
- Option TBMV1 for action on valve(s) only with constant fan operation.
- For 4-pipe or manual changeover 2-pipe system, possibility of mounting a low temperature cut-out sensor SD (temp. range 45 °C/35 °C) on hot water piping to stop fan operation.

## Aqu@Fan II - Main Controls (Optional) (continued)

#### Performances based on :

Summer : air 27 °C/19 °C (wet bulb) and chilled water 7/12 °C.

Winter : air 20 °C, entering water temperature 50 °C, water flow identical to cooling mode.

**Pt** : Total cooling capacity.

**Ps** : Sensible cooling capacity.

**Pc** : Heating capacity.

**WPD** : Water pressure drop.

 Standard wiring of the 3 speeds. Other speed combinations available upon request.

	V4	59	51	46	59	38	33
	V5	57	49	44	57	36	31

The sound pressure levels Lp are based on (NR) characteristic of a room having volume of 100 m<sup>3</sup> with reverberation time of 0.5 seconds.

(\*) Informative data, considering a sound attenuation of the room and installation of 21 dB.
