

PLAGES D'UTILISATION

Débits jusqu'à :	170 m ³ /h
Hauteurs mano. jusqu'à :	29 m
Pression de service maxi :	10 bar**
Plage de température :	-20° à +120°C
DN orifices :	32 à 80
MEI* de référence :	≥ 0,40

*Minimum Efficiency Index

**16 bar en option

AVANTAGES

• ECONOMIE D'ÉNERGIE

- Rendement élevé.
- Optimisation du point de fonctionnement des pompes.
- Economies d'énergie jusqu'à 50% par rapport à des pompes traditionnelles.

• MAITRISE DU BRUIT

- Suppression du sifflement et des bruits hydrauliques au niveau des robinets thermostatiques.
- Adaptation automatique des performances aux besoins de l'installation.

• SIMPLICITÉ

- Un seul bouton pour le choix des fonctions et le réglage des consignes, directement sur la pompe.
- Paramètres toujours visibles sur écran LCD
- Un seul modèle de convertisseur pour toutes les applications (Δp_c , Δp_v , PID et n-constant).
- Fonctionnement des pompes en mode secours ou parallèle.

• COMMUNICATION

- Affichage en local et à distance des informations de marches et d'erreurs.
- Consultation « instantané » de l'état de l'installation : consommation électrique, pression ou température.
- Enregistrement de la consommation électrique, temps de fonctionnement, horaire de mise en route des pompes...

LRE - JRE

POMPES EN LIGNE SIMPLES ET DOUBLES Pilotage électronique Chauffage - Climatisation 50 Hz

APPLICATIONS

Pour la circulation accélérée d'eau chaude ou glacée, non corrosive et sans résidus abrasifs, avec optimisation du point de fonctionnement.

- Chauffage petit collectif et collectif.

- Climatisation.
- Nombreuses applications industrielles ou agricoles.
- Chauffage de serres etc.

VEV

• JRE : pompe double à pilotage électronique

• LRE : pompe simple à pilotage électronique

LRE - JRE

CONCEPTION

Partie hydraulique

-Pompes simple ou double à bride (PN10/16), monobloc, centrifuge, monocellulaire, pourvue d'un système de régulation de vitesse intégré.
LRE: modèle simple ; JRE: modèle double.
-Orifices aspiration/refoulement en ligne.

Moteur

-Haut rendement IE4.
-Moteur à rotor sec.
-Etanchéité au passage de l'arbre assurée par garniture mécanique auto-lubrifiée.
-Protection moteur intégrée (PTC).
Vitesse : 750 à 2900 tr/mn.
Bobinage triphasé : 400 V ± 10%
Fréquence : 50 Hz
Classe d'isolation : F (155°C)
Index de protection : IP55
Conformité CEM : EN 61800-3
Conformité CEI : 60034

CONSTRUCTION DE BASE

Pièces principales	Matériau
Corps de pompe	EN GJL 250
Lanterne palier	EN GJL 250
Arbre	Acier X20-Cr13
Garniture mécanique	Carbure Si/carbone/EP ¹⁾
Roue	Polypropylène + Fibre de verre

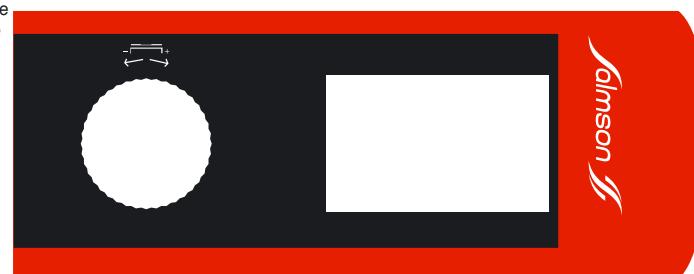

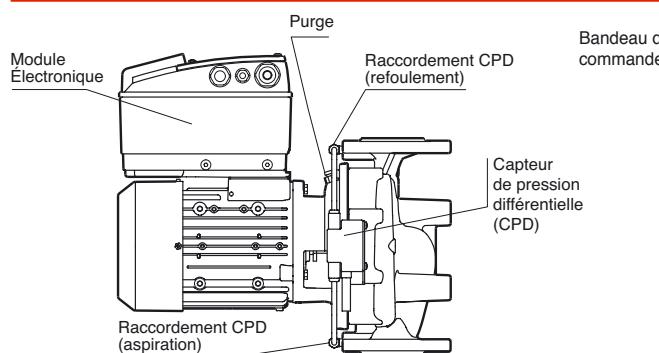

1) Garniture mécanique adaptée à de l'eau pure et à des mélanges eau/glycol jusqu'à 40% et une température maximale de 40°C. D'autres garnitures sont possibles pour des conditions différentes, nous consulter.

IDENTIFICATION

Code pompe _____
simple/double électronique _____
Moteur 2 pôles _____
Ø nominal des orifices en cm _____
Ø nominal de la roue en cm _____
Puissance moteur en kW _____
3^{ème} génération _____

DESCRIPTIFS

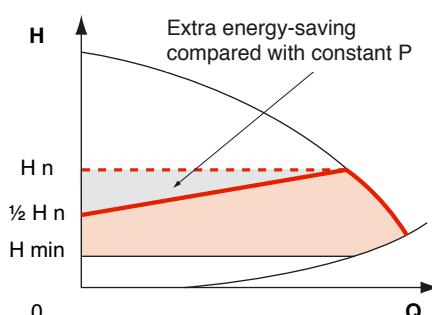

COURBES DE PRINCIPE DE FONCTIONNEMENT

• Fonctionnement en ΔP constant

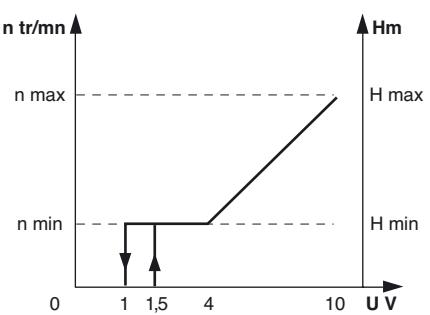

L'électronique maintient la pression différentielle, suivant le débit demandé, à la valeur de consigne H_n , jusqu'à la courbe caractéristique maximale.

• Fonctionnement en ΔP variable

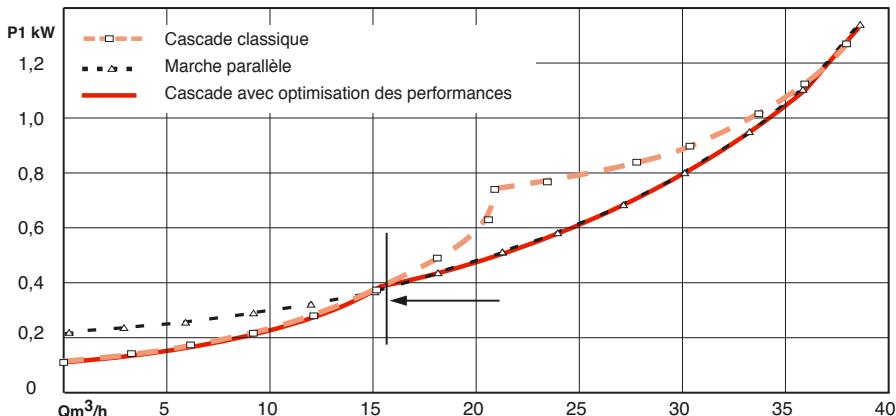

L'électronique modifie linéairement entre H_n et $1/2H_n$ la valeur de pression différentielle de consigne. La valeur de pression différentielle de consigne augmente ou diminue avec le débit demandé.

• Fonctionnement DDC (exemple 0-10V)

- Réglage externe de la vitesse ou du point de consigne par signal : 0-10V ou 2-10V ou 0-20mA ou 4-20mA
- Marche/arrêt externe
- Reports de défaut et état de marche

• Fonctionnement en cascade synchronisée

Fonctionnement en cascade d'une pompe JRE. A débit équivalent, la pompe utilise automatiquement la courbe de moindre puissance.

RACCORDEMENTS

Charge pour les contacts secs des reports de marche et de défaut : min.

12V DC/10mA,

max. 250V AC/1A

- **L1,L2,L3,PE**: Raccordement au réseau 3~400V/50Hz

- **SSM**: Contact sec inverseur pour signal de défaut global

- **SBM**: Contact sec inverseur pour signal de marche

- **AUX**: Permutation de la pompe externe (uniquement pour les pompes doubles). Via un contact extérieur, une permutation de la pompe sera effectuée (contact sec sans potentiel, permutation à chaque impulsion).

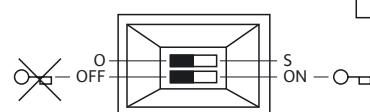

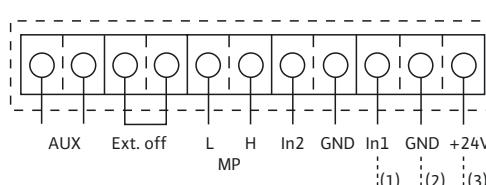

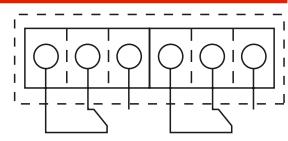

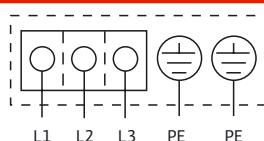

- **Ext Off**: Contact sec pour commande «marche/arrêt» à distance

- **MP**: Interface de connexion d'une pompe esclave pour gestion de pompe double

- **1**: IN1 connexion du capteur de pression différentielle 0-10V / 2-10V / 0-20mA / 4-20mA (entrée) correspond à 40 à 100% de la vitesse de rotation nominale

- **2**: GND masse

- **3**: +24V (sortie)

LRE - JRE

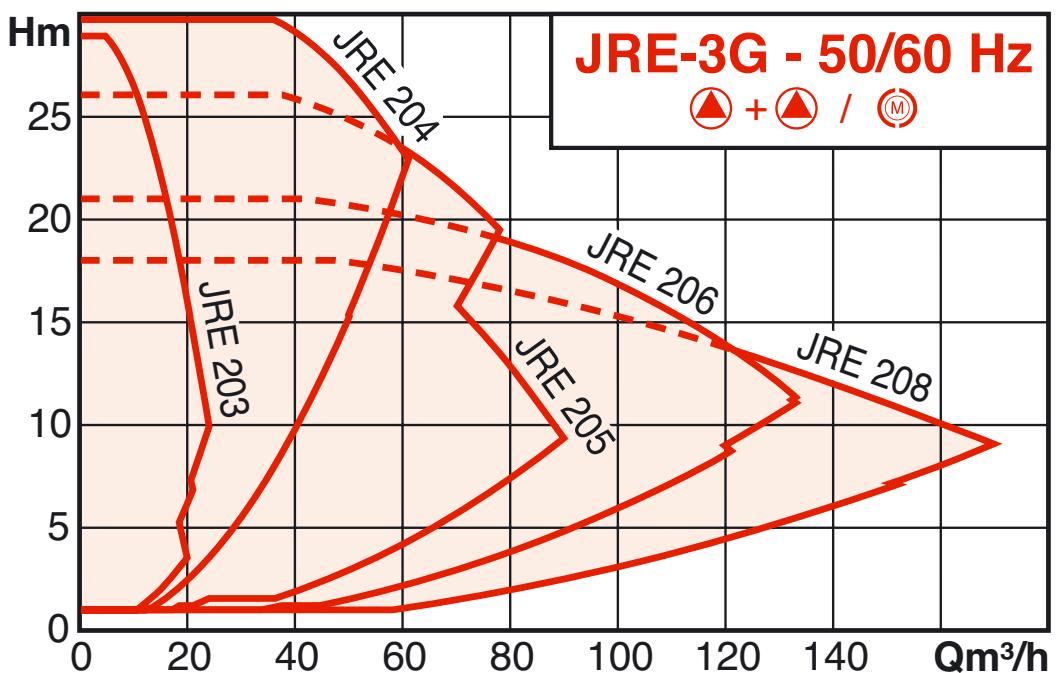

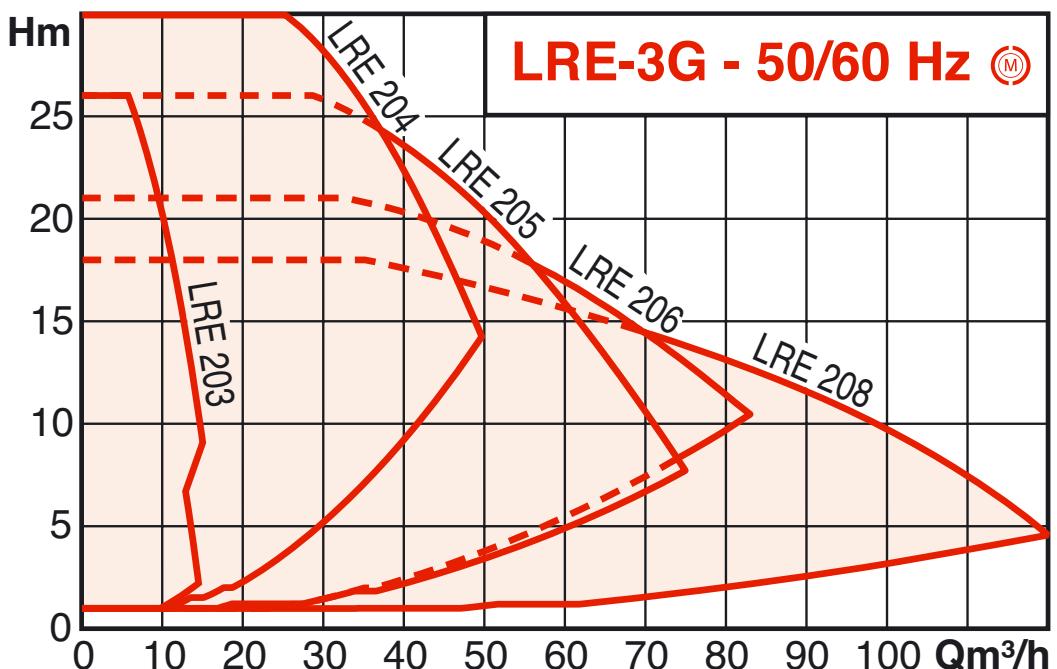

TABLE DE FONCTIONS LRE / JRE

Fonction	Pompes simples et doubles LRE / JRE
Modes de fonctionnement	
Δp-c pour pression différentielle constante	•
Δp-v pour pression différentielle variable	•
Mode réglage ($n = \text{constant}$)	•
Commande manuelle	
Bouton unique et écran	•
Fonctions manuelles	
Réglage de la consigne de pression différentielle	•
Réglage de la vitesse de rotation (mode réglage)	•
Réglage du mode de fonctionnement	•
Réglage pompe marche/arrêt	•
Configuration de tous les paramètres de fonctionnement	•
Acquittement des défauts	•
Fonctions de commande externes	
Entrée de commande « priorité Off »	•
Entrée de commande « Permutation des pompes externe » (uniquement active en mode double pompe)	•
Entrée de commande « Analog In 0 ...20 mA » (modification à distance de la vitesse)	•
Entrée de commande « Analog In 0 ...10 V » (modification à distance de la vitesse)	•
Entrée analogique 0-10 V pour le signal valeur réelle du capteur de pression	•
Entrée analogique 2-10 V, 0-20 mA pour signal valeur réelle du capteur de pression	•
Signalisation et affichage	
Message de défauts centralisé (contact de repos sec)	•
Message de marche centralisé	•
Echange de données	
Interface infrarouge pour l'échange de données sans fil avec la clef USB Salmson Pump control branchée sur PC portable	•
Emplacement pour modules IF Salmson (Modbus, BACnet, CAN, PLR, LON) pour la connexion à la gestion technique centralisée	•
Fonctions de sécurité	
Protection moteur intégrale avec déclencheur électronique intégré	•
Verrouillage d'accès	•
Pilotage pompes doubles (pompe double ou 2 pompes simple)	
Mode de fonctionnement principal/de réserve (permutation automatique en cas de défaut)	•
Mode de fonctionnement principal/de réserve (permutation des pompes au bout de 24 heures)	•
Marche parallèle	•
Marche parallèle (avec optimisation du rendement en fonction des besoins)	•

• = fourni

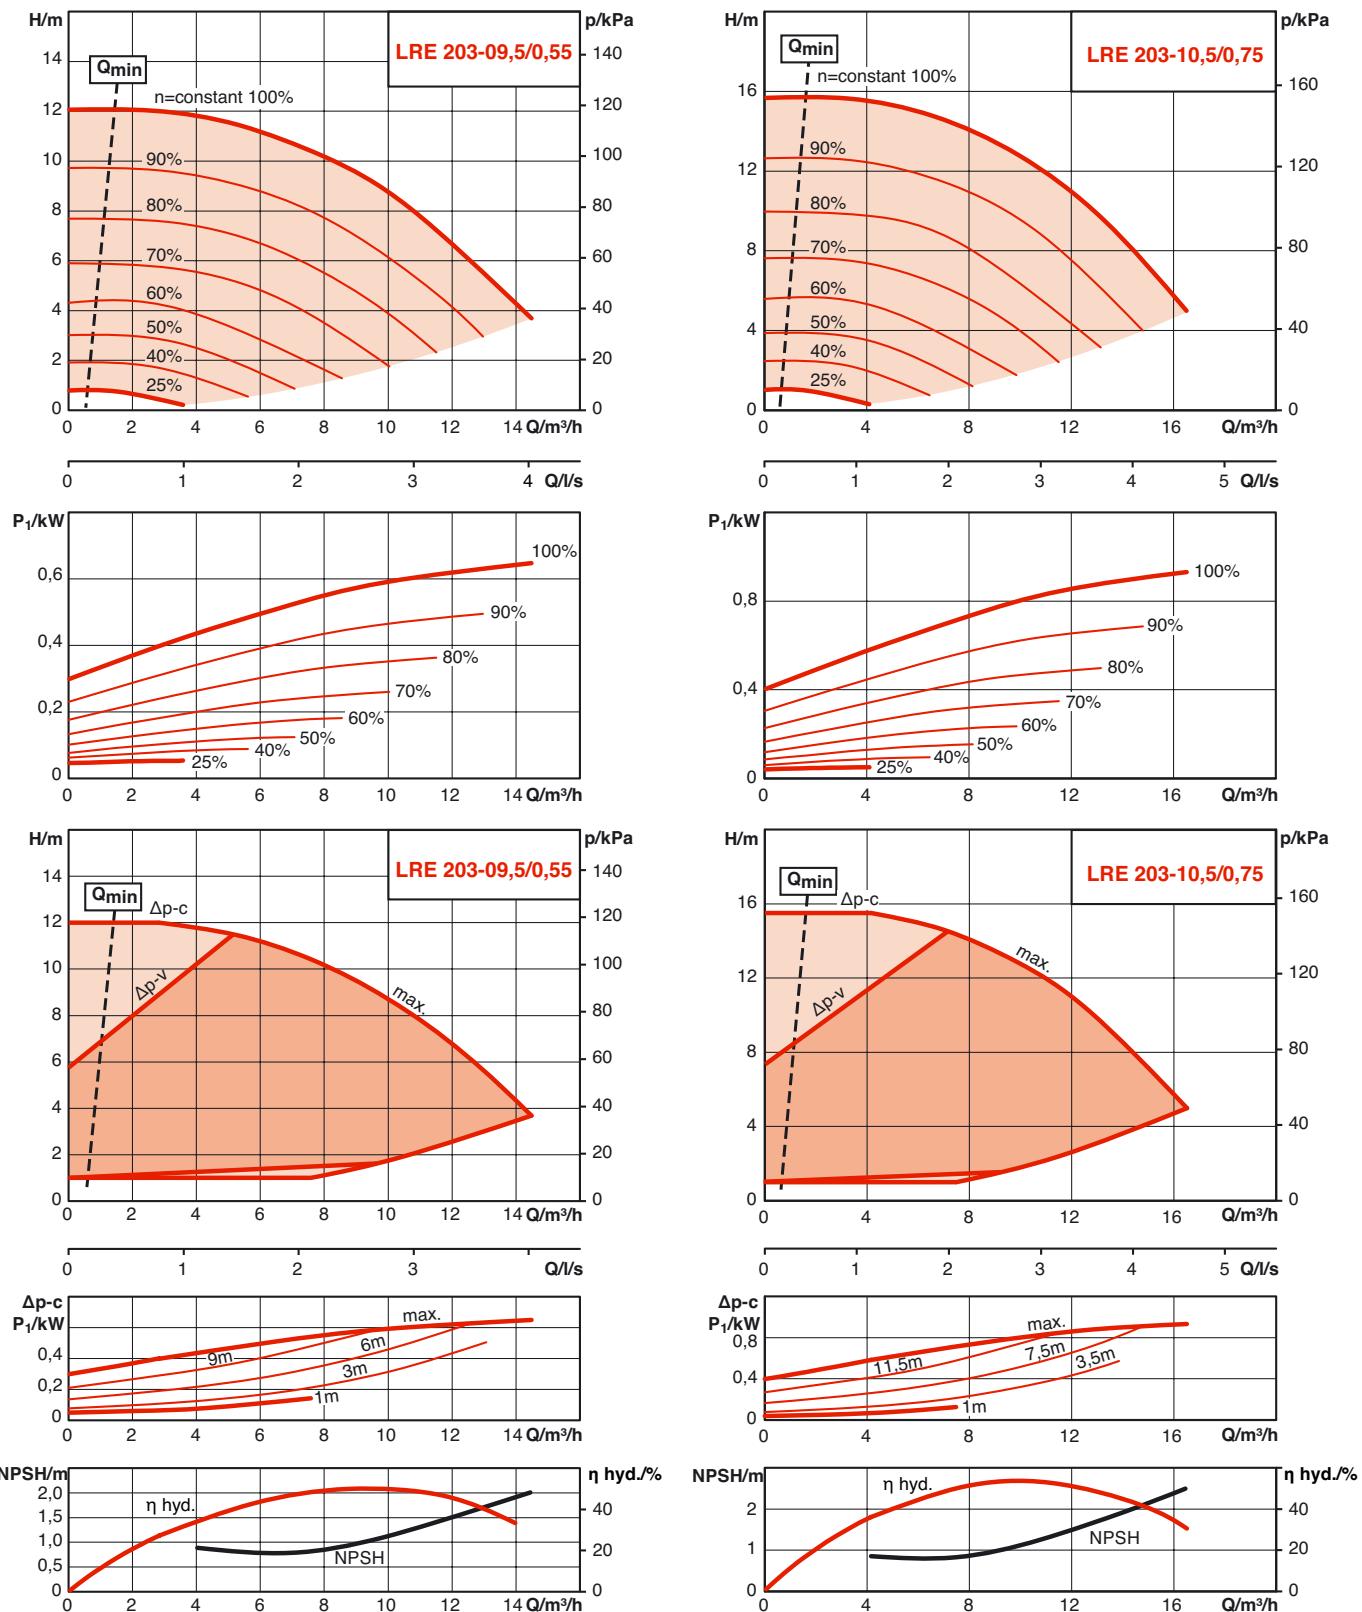

LRE - JRE

PARTICULARITÉS (LRE-JRE)

a) Electriques

- Tous types TRIPHASE 400V-50Hz.
- Protection moteur intégrale par sonde sur chaque bobinage.
- Arrêt défaut intégré en cas de surtension ou de surchauffe.

b) Montage

- Direct sur tuyauterie horizontale ou verticale.
- Raccordement à l'installation par contre-brides rondes à souder PN 10/16 (non fournies).

-Pour cette gamme l'installation en extérieur est interdite.

c) Conditionnement

Pompes livrées avec variateur de fréquence et capteur de pression différentielle, sans contre-bride.

d) Maintenance

Echange standard complet de la pompe ou réparation.

ACCESSOIRES

- Contre-brides rondes à souder PN 10/16.
- Vannes d'isolement.
- Module IF (ModBUS, LON, BACnet S/TP, CAN, interface numérique PLR)¹

1) Voir table de fonctions
